

o **Teeschools Web tool is ready**

The Teeschools web tool was tested for all partners' countries and it was adapted and harmonized with the objective to be used in local, regional and national energy plans. The pre-audit tool, which requires less detailed information, can streamline the auditing process and quantify carbon footprint.

The set of tools was adapted and harmonized with local climate and national regulation of participated partners which guarantee a continuation of its usage. Its access is free of charge and it will have an open access modality.

o **Our testing phase is completed**

TEESCHOOLS, through its partners from 7 Mediterranean countries prepared a BAT database, which contains best available techniques for efficient and low impact buildings and developed optimal financing schemes. Energy efficiency state of art in Mediterranean schools was prepared, composed of the state of art in each partner country in order to better define the specificities of each involved area. The International expert team participated in selected on site audits in all project pilots, applying a Common Technical Protocol.

o **Teeschools training activities**

Starting from Split in September 2018, an internal training involving partners and stakeholders was implemented on the following training packages:

[Read More](#)

o **Exchanging know-how at world café**

In each country a world café event was organized in parallel with external trainings. Three of the participating countries organized it on the same day with the training and the other four on a different day.

The main participants were: directors of schools, teachers, private entities, technical staff of schools, technicians from local entities, representatives from Higher Education and Research. The form of the event was almost the same for all participants as it had been identified during the internal training in Split.

o **Promotional - external events**

Partners from 7 different countries participated in more than 15 events during the last months presenting Teeschools and its results by far.

Conferences, Fairs, EGTC's and Technical meetings, Open Door days are the main events' type that our partners chose to disseminate the project objectives.

• **Collaborative network**

Collaborative network has been firstly created as a private facebook group. Later on, it was strengthened through meetings among stakeholders.

The first one took place in Split and stakeholders from all project partners participated in it. Their useful knowledge and experience were recorded in a questionnaire that was disseminated to all of them collecting info about relevant policy recommendations developed during 2018, the country level on energy efficiency issues in school buildings etc. The second one was organized in each participated country by all national partners, who invited selected stakeholders to contribute to the scheduled workshop and external training. Main topic for discussion was the behavioural change on energy efficiency.

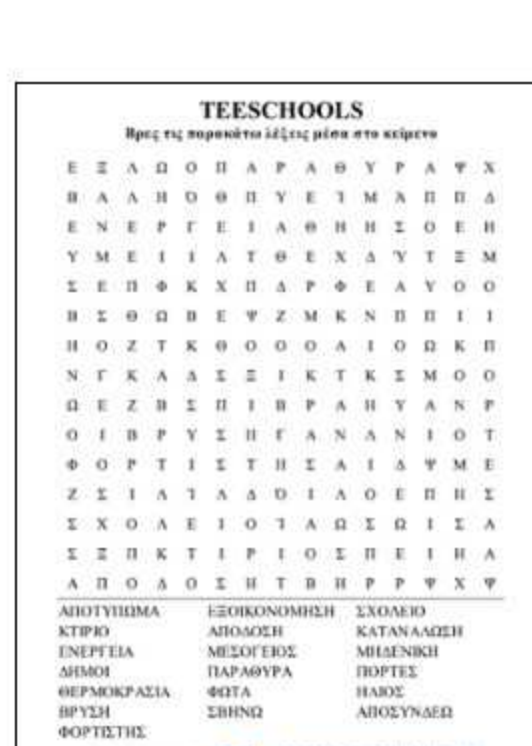

• **Technology and Open lessons in schools**

Some daily practices that can all adopt, especially young pupils and students is the main objective of the open lessons in schools that are foreseen for the next period. Furthermore, teachers and technical staff will also be involved as they can contribute to the adoption of every day simple actions on energy efficiency favor. These actions will be presented to pupils of 10 schools per country in accordance with a simplified presentation.

A wordsearch puzzle with energy-related words has been also prepared in its country's language and will be distributed to the pupils in combination with another project dissemination tool, which has to be identified by each partner separately.

- And even more...
- Press Releases
 - Conferences with local and regional stakeholders
 - SC meeting in Athens on 6th March 2019

o **Our photo gallery...**

...is a fact. We have already inserted photos from important events and we will keep on enriching it with even more.

Training activities, world café, external events, energy audits are the albums made so far and include representative photos of the most important project events.
